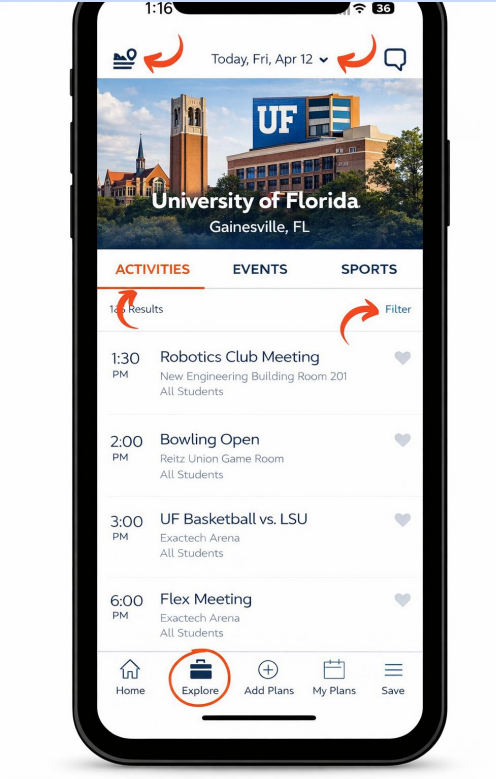
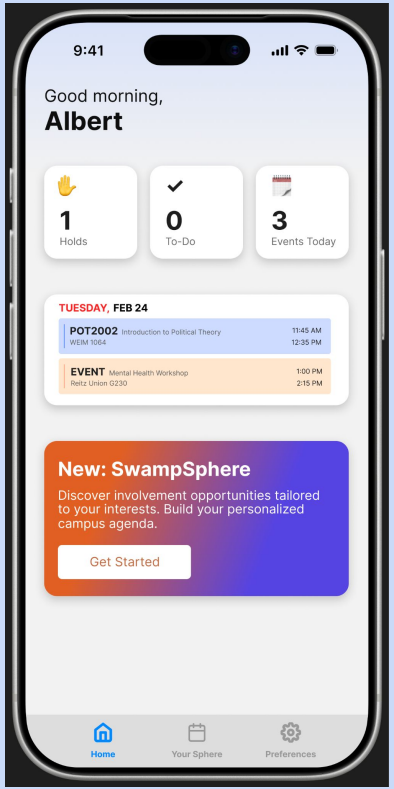
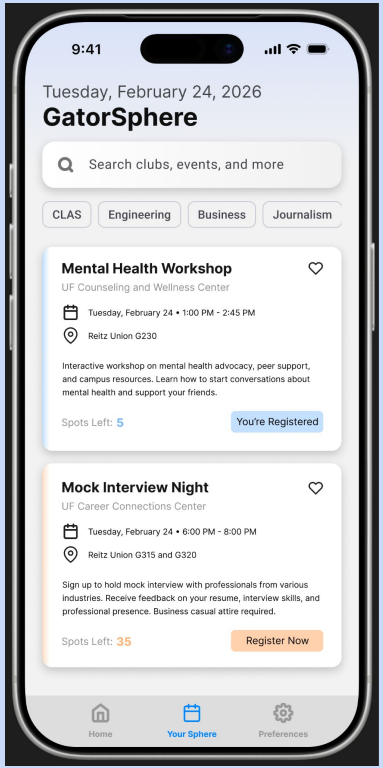
SwampSphere







Project description

This is a centralized platform designed to connect students with everything happening on campus. From student organization and service opportunities to campus events, leadership roles, and academic involvement, the app provides access to ways students can engage with the Gator community.

The app answers common questions students ask daily:

“How did you know about that involvement opportunity”

“How can I become more involved”

Project goal and audience

-The goal of our app is to increase student engagement and having one accessible place where all students can go to gather information of UF involvement.

-The primary audience is all University of Florida students

- Incoming freshman, transfer students, and upperclassmen who are looking to get more involved on campus

- Secondary audiences include organization and departments that want to promote their events in increase participation

How the app works

-There will be an option to filter campus events/activities to best pertain to the interests of the user. Additionally, there would be a description of each activity online along with direct online registration. Once a student registers for an event, it will show up in their personal agenda, and students can have the option to sync Google calendar to the app to keep track of their involvement. If an event reaches maximum registration it will be shown

-The app will be an extension of an original UF app or a new app

Logistics

Planning and Development: Spring 2026 - Summer 2026

Testing: Fall 2026

Campus Launch: Spring 2027

Space or room needs: N/A

Estimated attendance: N/A

Materials and equipment needed: Website, design, support from student government and UF admin
